

BARRETO EDGE

Your Stump Grinder Called...It Wants Its 15 Minutes of Fame!

Got a project you're proud of? Whether you're building, digging, lifting, landscaping, or tackling that "weekend project" that's lasted three months, we want to feature YOU in our company calendar!

Show us your favorite Barreto equipment in action and the hardworking people behind the project. No professional photos or modeling experience needed, just your smile, your project, and maybe a little dirt on your boots. After all, every great job has a story, and we'd love to share yours.

Photo requirements:

High- resolution image (300 DPI minimum)

Barreto equipment must be visible

Include your business name with your submission

Action shots and job site photos encouraged

Ready to show off your Barreto?

Submit your best shot along with your business name for a chance to be featured!

Weight	2,060LBS
Height	55.75"
Length	95.4"
Width	35"
Track Width:	9"
Ground contact area	760 sq in
Payload capacity	2,200LBS
Tub volume	14 cu ft
Dump angle	90°
Pivot angle	180°

ENGINE OPTIONS:

Briggs Vangaurd (Hp:23)	23hp V-Twin
Fuel	Gasoline
Fuel Tank Capacity	4.7 gal

ADDITIONAL SPECS:

Ground drive speed	
Forward	5.5mph
Reverse	3.5mph

MADE IN THE USA

Straight From the Jobsite

We've used a lot of concrete dumpers over the years, and the 23CD stands out from the rest. After providing feedback on the first demo unit, it was impressive to see those suggestions incorporated into the production model. The updates made cleanup much easier and improved overall operator comfort, showing that customer feedback truly matters.

In the field, the tracked design provides excellent flotation with less ground disturbance than wheeled machines, especially when traveling over rebar or soft subgrade. The hydraulic system is another standout feature, it has no trouble lifting and dumping a full hopper, even when fully loaded, which isn't something we've experienced with every dumper we've used.

My favorite feature is the 180° rotating hopper. Being able to dump to either side without constantly repositioning the machine is a huge advantage on tight jobsites where space is limited. It saves time, improves efficiency, and makes concrete placement much easier. Whether we're working in narrow backyards or on challenging residential pours, the 23CD helps us get the job done faster with less effort.

Overall, the 23CD has become a valuable part of our operation. It's well-built, easy to operate, and designed with real-world jobsite needs in mind. If another contractor asked me which concrete dumper to buy, I'd confidently recommend the 23CD without hesitation.

-Jacob Christopher
Challis Concrete

DID YOU KNOW? OVER 80% OF OUR PARTS ARE MANUFACTURED IN HOUSE AND WE ARE PROUD TO BE AN AMERICAN MADE COMPANY!

Think It's Just for Concrete? Think Again.

- Clean up yard debris
- Haul animal feed
- Move mulch, gravel, and rock
- Demolition clean up
- Transfer water
- Pair it with the 7TSC Sod Cutter to haul away old sod and deliver new sod
